

C2V Choose DesignDataManager

NEWBURY, Berkshire, UK, January 2008, - Concurrent Systems Inc Ltd (CSI), a leading developer of design data and document management solutions today announces that they have implemented DDM at C2V, suppliers of micro GC gas analysis instrumentation, providing a comprehensive design data/document management and sharing solution for IronCAD®.

"C2V selected DDM, primarily to control our engineering drawings and documents created in IronCAD®. However, DDM offers much more than just control over the CAD data, with built in functionality for document control and process workflow, DDM will help facilitate the company's quality control through our current period of growth. Through the administration tool it is easy to configure and control who can authorise, release and make changes to objects in the database, and with full traceability, it is an ideal tool to help ensure compliance with quality standards. We were also after a tool that would help the design for production process and DDM's flexibility allows us to transfer BOM information directly into our own ERP system", says Maarten Donker of C2V.

"Having one master record for our engineering data is important to us and we see DDM as the tool that will help us achieve this."

"C2V had been monitoring DDM's development over a period of time and with the latest release quickly moved to implementation as it provided them with the functionality they were looking for", States CSI Channel Manager, Mark Blatherwick, "C2V were looking for a system that not only controlled their CAD data but also allowed them to map their business process which they can no achieve using the built in graphical workflow."

About C2V

C2V specializes in fast chemical gas analyzers based on silicon micromachining technology and a proprietary microDELTA™ integration platform. C2V's revolutionary micro GC (Gas Chromatograph) creates unique opportunities for fast volatile detection at any location. C2V's micro GC can be ordered as a standard single instrument (the C2V-200), but we also supply customized lower cost OEM modules in higher volumes. The C2V-200 fast micro GC is used in industrial processing, mining, environmental, security, safety, laboratories and quality control. C2V has its office and fabrication facilities located in Enschede, The Netherlands.

About DesignDataManager

CSI's DesignDataManager (DDM) provides engineers with affordable, easy to use data management solutions without the usual high consulting and maintenance overheads associated with most PDM/PLM systems. With integrated engineering change functionality and graphical workflow process management based on a powerful project centric use model, DDM is a Multi-CAD PDM solution, fully integrating into a number of market leading 3D modelling products including Pro/ENGINEER®, SolidWorks®, Solid Edge®, IronCAD®, Autodesk Inventor®, AutoCAD® and CoCreate Onespace Drafting. DDM also supports most Windows document file formats such as Word, Excel & PDF. www.designdatamanager.com

About Concurrent Systems Inc Ltd (CSI)

CSI is a leading specialist in Product Data Management and Product Development solutions, providing development, sales, support and implementation services for a wide range of users and CAD systems including Pro/ENGINEER®, SolidWorks®, Inventor®, Solid Edge®, IronCAD® and Onespace Designer. www.csi-europe.com CSI is also an established CoCreate reseller.
